

Coffee roaster Gene CBR-101E (New model from 2023)

Most important features Gene CBR-101E

- 250 gram bean filling (160 to 300 grams)
- 2 rotary knobs to control the coffee roasting process for easy operation:
Red control: target roasting temperature as well as start and end of roasting - (can be changed individually at any time during roasting)
Blue controller: Roasting time as well as switching on and off - (can be changed individually at any time during roasting)
- Even roasting due to strong hot air supply
- Beans are clearly visible thanks to large glass flask
- Collection container for skins
- Possibility of exhaust air deflection by attaching an exhaust air hose from the DIY store
- Roaster's own bean cooling system: starts automatically after the set roasting time has elapsed. Can also be activated at any time during roasting (briefly press the red control knob). Or individual bean cooling outside the roaster (press and hold the red control knob: Ends the roasting process without activating the roaster's own bean cooling system)
- Every component of the Gene CBR-101E coffee roaster is available as a spare part for many years
- Long-proven, classic household coffee roaster, widely used - many discussions and tips on the coffee network and other platforms for roasting coffee at home

Technical data

- Manufacturer's description: Gene Café CBR-101
- Width: 49cm, Height: 24.3cm, Depth: 22.9cm
